Migration Notes/Domino to Outlook/Exchange

Strategies and prioritized process models

Every migration project sets new framework conditions, but there are best practices that offer a high guarantee of success for a migration project. Our tools have matured in these projects over the years and guarantee an efficient, cost-saving and risk-minimizing approach.

Step by step

- Detailed assessment of the Lotus Domino/Notes-based infrastructure
  - Determination of the quantity structure for mail and applications
  - Determination of migration-relevant facts and general conditions
- Development of the future Exchange infrastructure concept or, if this infrastructure already exists, concept for the expansion of the Exchange infrastructure
- Development of the mail migration concept, in consideration of the possible temporary coexistence of both platforms
- Development of the migration concept for the applications
  - Definition of the migration path for each individual application, in consideration of the possible temporary coexistence of both platforms
- Building the Exchange infrastructure (if not already in place)
- Mail migration
- Building the SharePoint infrastructure or other application platforms
- Application Migration

Knowledge and experience of our project managers

Depending on the nature of the task at hand, various holistic-net GmbH employees can take on the task of project management. Our project managers have more than 20 years of experience in project management, including a large number of infrastructure, migration and application development projects for customers of all sizes (Bayer, Henkel, BASF, Continental AG, as well as medium-sized and smaller companies). They are very much familiar with both HCL Domino-based infrastructures and Microsoft Exchange-based infrastructures.

Knowledge and experience of our team

holistic-net has an experienced team of employees who have worked on the above-mentioned projects. In addition to the skills on the required core topics, they also have extensive experience in the application of the tools used. In addition to holistic-net GmbH's own tools, these also include migration tools from third-party manufacturers (e.g. Quest [now Dell]).
